

JORDAN M. VANCE

Full-Stack Software Engineer 📍 Seattle, WA | ☎ 555-0987 | ✉ jordan.vance.dev@email.com | 💻 github.com/jvance-codes | 🔗 linkedin.com/in/jordanvance

Professional Summary

Innovative Software Engineer with 5+ years of experience building scalable web applications. Specialist in **React**, **Node.js**, and **Cloud Infrastructure (AWS)**. Passionate about writing clean, maintainable code and optimizing system architecture to improve performance. Developed a custom microservices framework that reduced server costs by 30%.

Technical Toolkit

- **Languages:** JavaScript (ES6+), TypeScript, Python, SQL, Go.
 - **Frontend:** React, Next.js, Redux, Tailwind CSS, Webpack.
 - **Backend:** Node.js, Express, Django, PostgreSQL, MongoDB, Redis.
 - **DevOps & Tools:** AWS (EC2, S3, Lambda), Docker, Kubernetes, CI/CD (GitHub Actions), Jest.
-

Professional Experience

Software Engineer II | CloudScale Solutions *January 2021 – Present*

- Architected and deployed a real-time analytics dashboard using **React** and **Socket.io**, handling over 1 million events per day.
- Migrated a monolithic legacy codebase to a **Microservices architecture**, improving deployment frequency from bi-weekly to daily.
- Mentored 3 junior developers and established a rigorous peer code-review process, reducing production bugs by **15%**.
- Implemented **Redis caching** layers that improved API response times by an average of 200ms.

Junior Full-Stack Developer | Innovate IT *June 2018 – December 2020*

- Developed responsive UI components using **Tailwind CSS**, ensuring cross-browser compatibility for 20+ client websites.
- Streamlined database queries in **PostgreSQL**, leading to a **25% reduction** in load times for high-traffic pages.
- Collaborated with the UX/UI team to translate Figma wireframes into functional, accessible codebases (WCAG 2.1 compliance).

Key Projects

Open-Source Contribution: "DevPulse" * Created a VS Code extension that tracks developer productivity metrics; currently has **2,000+ active installs** on the Marketplace.

Smart-Recipe Engine * Built a full-stack AI-driven application using **Python/Django** that suggests recipes based on pantry inventory using computer vision APIs.

Education

B.S. in Computer Science *University of Washington* * Relevant Coursework: Data Structures & Algorithms, Distributed Systems, Database Management.

System Performance Metrics

Metric	Before Optimization	After Optimization
Lighthouse Performance Score	64	98
Database Query Latency	\$450ms\$	\$120ms\$
Build/Deploy Time	12 mins	4 mins
